

RAVIBALA

EXPORTS

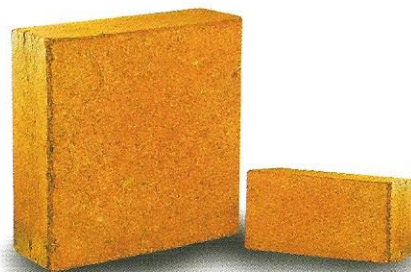

COCOPEAT & FIBRE

ISO-9001 HACCP Certified

Ravi Bala Exports is one of the largest Exporters of Coirpith from South India with wide market presence in Europe, USA, Japan, Australia, far East and New Zealand. Our company has come a long way since inception in 1994 through our commitment to excellence & innovation. Coir peat or Coco Peat is a by product after the extraction of the coir fibre from coconut husk. It is a pure natural organic biodegradable matter. It is also an eco-friendly growing medium, ideally used as a Soil Reconditioner, Soil Structure Improvers & Soil Substrate. Our service, quality and innovation have helped to secure long term partnership with our customers.

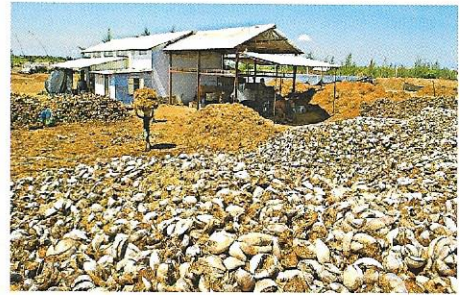

ADVANTAGES

Coir Pith is a mixture of corky cellular material and short fibers and has both the appearance and feel of peatmoss. It is a completely homogenous material composed of millions of capillary micro-sponges. As it is a natural spongy medium that can be used as a growing medium, Coir Peat can replace peat moss as the best growing material for gardening and other horticultural needs. What's more, mixing Cocopeat in the soil is, by far, the most efficient and economical way to rehabilitate degraded soil without the risk of contamination and socio-economic dislocation - making it an important component in slope stabilization and riverbank rehabilitation.

INFRASTRUCTURE

Ravibala stands among the most modern Cocopeat units in the world serving the customer's needs for more than 7 years. We have a comprehensive and full-functional factory equipped with the state-of-the-art machines for manufacturing coir pith. The manufacturing facilities are backed by a team of dedicated and highly talented professionals. Each of our machines is constantly kept under the observation of the experts who not only detect the faults & rectify them but also inform the higher authority as & when a gadget is deemed obsolete or scarcely repairable & hence pregnant with the prospect of impinging on cost effectively. Our Factory is close to the main motor way networks and provides an excellent base to serve our customers.

PROCESS

We apply latest technology to manufacture Cocopeat making it ideal for vegetables, flowers, plug and cell production, for tubestock and for tissue culture deflasking. The peat is washed with demineralized water to remove further impurities. At most care has been taken to meet the specification of the buyers.

PROCESS

Cocopeat from Ravibala improves the dampness and water holding ability for indoor and outdoor potting mixes. Its high Air Filled Porosity and high Water Holding Capacity makes it the ideal medium for all plant growing applications. It provides better yield and enhances strong and healthy root growth with resistant to bacterial and fungal growth.

Now looking at our infrastructure we have a role to play in shaping up the future. We have a deep insight of the needs of our customers and always try to satisfy them through our exemplary service hence we have a widespread client base globally. The product packed according to the specifications of buyers is shipped through well equipped logistic suppliers. We know much has been achieved but have long way to go, yes the future beckons brightly and we are sure to be there.

HUMAN RESOURCE

Our people have achieved a broad prospective and in-depth technical knowledge in quality management and manufacturing. Operating in a safe and healthy environment assures quality production. Enhancement of technology and human capital makes sure that we stay ahead. Keeping that focus in mind, we have the best of skilled labor, technically sound backup and maintenance staff and the most superior machinery that all comes together and in the end to make sure that our product quality is never compromised.

FUTURE GROWTH

Coco Peat is available in Compressed Blocks / Bricks, Grow Bags Strips & Compressed Planks for usage in different applications. Our Cocopeat is mainly used as a substrate for floriculture and horticulture crops and Provides opportunity to build better playing fields that benefits the entire community.

QUALITY

Our in-house quality control and well-managed export department assures the buyers prompt delivery with competitive prices. We are focused to meet the challenges of globalization by improving quality achieving cost reduction and enhancing efficiency. The quality of products is hard to beat as these are the products of patience, hard work, and superior stuff. Raw materials are carefully selected to develop world class products.
